

MAGPI

The browser worker that finishes the campaign

Magpi is the browser worker for campaigns that take hours or days. Its low-cost worker handles repeated web work while the harness keeps state and routes exceptions. A frontier model periodically reviews the work and coaches the next phase, so Magpi uses expensive intelligence where it changes the quality of the campaign.

FOR For small businesses and operations teams that want recurring browser work completed—not another expensive chat to supervise.

Why Magpi can run cheaply

Magpi keeps the campaign plan and browser state outside the repeated model loop. A lower-cost model performs the harvest work. At checkpoints, a frontier model reviews what the worker produced, identifies drift or uncertainty, and coaches the next phase.

LOW-COST WORKER

Handles repeatable pages, forms, and data collection across the campaign.

MAGPI HARNESS

Retains state, manages the next step, and routes exceptions without restarting the campaign.

FRONTIER COACH

Reviews output at checkpoints, spots failure patterns, and guides the lower-cost worker when the campaign needs stronger reasoning.

Browser work Magpi can delegate

Competitor price sweeps

Visit priority product pages, log price and stock changes, and flag exceptions instead of checking SKUs by hand.

Marketing morning pulse

Pull yesterday's numbers from scattered dashboards, assemble one table, and prepare a short human review.

Marketplace reconciliation

Compare Shopify and marketplace listings, surface sold-but-live items and mismatches, then pause before any write action.

Delegated harvesting multiplies output

5×
OUTPUT

Service business: account research briefs

One owner reviews 100 account briefs each week rather than researching 20 accounts manually.

10×
OUTPUT

E-commerce operator: priority SKU monitoring

One operator watches 500 product pages each day rather than opening 50 pages by hand.

Illustrative operating targets, not customer results. Output depends on the workflow, websites, model, and review standard.
